

ATTACHMENT 3

3.0 STATUS OF GWMP

This proposal requests a grant to prepare a ground water management plan (GWMP) for the Banning Storage Units of the San Gorgonio Pass Ground Water Subbasin. The Plan will focus on the Banning, Banning Bench, and Banning Canyon Storage Units (Banning Storage Units) of the San Gorgonio Pass Ground Water Subbasin in order to insure and improve the long-term reliability of ground water from the storage units. The GWMP goals are to provide current and future Stakeholders an understanding of the state of the storage units, complete and adopt the Plan, with storage unit specific Basin Management Objectives (BMOs), prepare a ground water monitoring program, and conduct annual reporting for the Plan Area, and develop management practices within the Storage Units for both the near and long term. Based on the schedule in Attachment 7, the GWMP is proposed to be completed in December 2014.
